

Gonzalo Oviedo Lambert

Senior Backend Engineer (Elixir) / Lead Software Engineer

Santiago, Chile (Fully Remote)

goviedo.laboral@gmail.com | +56 9 6372 3603

linkedin.com/in/gol | English B1 (Intermediate)

Professional Summary

Senior Software Engineer and Lead Developer with over 15 years of experience specializing in building, integrating, and modernizing highly concurrent and scalable systems. Proven expertise in backend development with **Elixir**, **Phoenix**, and **PostgreSQL**, combined with frontend capabilities (React, Next.js) and cloud infrastructure (GCP, AWS). Highly skilled in leading cross-functional projects, designing robust APIs, and establishing automated testing and GitLab/GitHub CI/CD pipelines.

Pioneering Agentic AI Developer & Architect: Cuento con experiencia diaria operando como un **AI-Enhanced Software Engineer**, diseñando y operando *harnesses* de agentes de software (como **Pi.dev** y **open-code**). Me especializo en rediseñar los flujos de entrega de ingeniería integrando agentes autónomos como capa por defecto. Domino el ciclo de automatización de extremo a extremo (**spec** → **plan** → **execute** → **verify**), aplicando criterio de ingeniería humana y pensamiento sistémico profundo para crear primitivas reusables de IA, implementar bucles de verificación rigurosos (tests, evals, checks y guardrails) y garantizar la entrega de software robusto, seguro y escalable.

Technical Skills

- **Backend & Ecosystem:** Elixir, Phoenix Framework, Ash Framework, Java (1.8 - 21), Spring Boot, REST APIs, Web Services, Python, SQL.
 - **Frontend & Interfaces:** React, Next.js, Vue.js, JavaScript (ES6+), HTML5, CSS3, Flutter.
 - **Databases:** PostgreSQL (advanced), Oracle SQL, PL/SQL, MongoDB, MySQL, SQL Server.
 - **DevOps, Cloud & Infrastructure:** AWS (nice to have), Google Cloud Platform (GCP), GitLab CI/CD, Docker, Kubernetes, Pulumi (IaC), Git/GitHub.
 - **Methodologies & Quality:** Extreme Programming (XP), Scrum/Agile, Verification Loops, Unit & Integration Testing, Systemic Thinking, Code Reviews.
-

Professional Experience

Tech Lead & Lead Software Engineer | *Mobility Startup*

2024 – Present

Technologies: Elixir, Phoenix Framework, Ash Framework, PostgreSQL, Flutter, Java 21 (Spring Boot), Google Cloud Platform (GCP), Pulumi (IaC), Docker, Git. - Led the backend architecture and development of a high-throughput mobility platform built entirely with **Elixir**, **Phoenix**, **Ash Framework**, and **PostgreSQL**. - Redesigned software delivery workflows by introducing autonomous agents as the default execution layer, designing and orchestrating customized agent harnesses (**Pi.dev**, **open-code**) to manage the full agent lifecycle. - Operationalized robust agentic workflows end-to-end (**spec** → **plan** → **execute** → **verify**), establishing strict verification loops (automated tests, static checks, and guardrails) to guarantee that AI-generated code meets production grade. - Developed reusable agentic primitives within the codebase to accelerate features across multiple business domains, increasing engineering delivery speed by 300%. - Designed and built scalable REST APIs and services, utilizing GitLab for version control, issue tracking, and automated CI/CD deployments.

Java Associate Developer | *Perficient - Caterpillar*

2022 – 2023

Technologies: Java 21 (Spring Boot), REST APIs, SQL, Docker, GitHub, CI/CD. - Developed and maintained a global e-commerce platform using Java and Spring Boot, establishing highly reliable backend services and APIs. -

Collaborated in distributed multicultural teams across the US, India, and Latin America, following agile practices, rigorous testing, and git-based CI/CD workflows (branches, PRs, and code reviews).

Java Specialist & Analista Programador | Citibank

2021 – 2022

Technologies: Java, Oracle SQL, PL/SQL, Spring, Git, Jenkins, Web Services. - Engineered transactional backend modules and financial reporting tools, optimizing complex Oracle SQL queries to ensure high data consistency and speed. - Participated in a large-scale data migration from Sybase to Oracle within a global team, integrating legacy and modern web services compliantly.

Tech Lead | Seven IT SpA (Hospital Cruz del Norte, SQM)

2017 – 2020

Technologies: Node.js, Spring Boot (REST, MVC), PostgreSQL, JavaScript, jQuery, Vuetify, Google Cloud Platform (GCP), Docker, GitLab. - Owned the end-to-end lifecycle of a complex Healthcare Management System, translating stakeholder requirements into a robust, deployed, and supported product. - Designed and developed the relational database schema in PostgreSQL, the backend in Spring Boot/Node.js, and a responsive web interface in JavaScript/Vuetify. - Led and mentored a development team of 4 engineers, conducting code reviews, establishing testing best practices, and automating deployments with GitLab and Docker.

Senior Software Engineer / Fullstack Developer | WebClass, Creasys, Coopeuch, Others

2008 – 2017

Technologies: PHP, Java, Python, .NET, C, AS/400, Struts, Hibernate, PostgreSQL, SQL Server, Oracle PL/SQL, JavaScript, CSS, HTML, Jenkins. - Developed full-cycle web applications and digital integration solutions across fintech (Coopeuch), ed-tech (WebClass - 1,800 schools), and IT consulting (Creasys). - Built and consumed web services (SOAP/REST) to bridge systems during complex banking migrations (AS/400 to Java) and digital automation projects. - Maintained diverse production codebases using languages such as Python, PHP, .NET, and Java.

Education

Computer Science and Informatics Engineering

Universidad del Bío Bío

Thesis: Extreme Programming (XP) — Theory and Practice.
