Professional Summary

A Senior Full Stack Developer and Technical Lead with over 15 years of professional experience architecting and building highly scalable web applications, robust REST APIs, and distributed microservices architectures. Highly proficient in backend ecosystems (Node.js, Java/Spring Boot) and modern frontend libraries/frameworks (React, Vue.js, Flutter). Expert in advanced relational database design, query optimization, and schema design (PostgreSQL, Oracle, MySQL, SQL Server).

A pioneer in integrating Agentic AI software harnesses (such as Pi.dev, opencode, and custom agent workflows) into daily development workflows. Operates as an AI-augmented coder, combining architectural rigor and human judgment with AI agent orchestration to accelerate development delivery by up to 300% while maintaining flawless code quality. Brings a solid computer science foundation in systems programming (C++) and Infrastructure as Code (GCP, Pulumi). Experienced in leading engineering teams and collaborating within high-performance, English-speaking global environments (USA, India, Ukraine, LATAM).

Technical Skills

Core Stack - Programming Languages: JavaScript (ES6+), TypeScript, Node.js, Java, SQL, C++ - **Frontend Frameworks:** React, Redux, HTML5/CSS3, Vue.js (Nuxt), Flutter - **Backend Frameworks:** Node.js (Express, NestJS principles), Java (Spring Boot) - **Databases:** PostgreSQL, Oracle SQL (PL/SQL), MySQL, SQL Server, MongoDB - **Cloud & DevOps:** Google Cloud Platform (GCP), Pulumi (IaC), Docker, Git, CI/CD (Jenkins, GitLab CI, GitHub Actions) - **AI-Assisted Development:** Pi.dev, opencode, Hermes (daily hands-on orchestration of agentic software harnesses)

Architectural Patterns - RESTful APIs, Microservices Architectures, Event-Driven Architecture, Hexagonal / Clean Architecture, Object-Oriented Design (GoF)

Professional Experience

Lead Software Engineer & Tech Lead | *Startup de Movilidad* | 2024 – Present - **Technologies:** Node.js, React, Elixir/Ash, Java 21, Google Cloud Platform, Pulumi, Docker, Pi.dev, opencode Agentic Harnesses - Lead the technical team and spearheaded the full-cycle full-stack development of a scalable mobility platform utilizing React on the frontend and Node.js/Java microservices on the backend. - Designed and built the complete agentic AI integration utilizing Pi.dev and opencode software harnesses, coordinating custom skills, commands, and multi-agent workflows to increase development velocity by 300%. - Architected high-performance microservices, deploying containerized applications with Docker to Google Cloud, fully automated via Pulumi Infrastructure as Code (IaC). - Designed dynamic relational database schemas in PostgreSQL to handle high-volume GPS tracking, real-time events, and transactional logs. - Fostered a highly collaborative team environment, enforcing clean architecture standards, continuous integration, and AI-native developer mentoring.

Senior Full Stack Developer (Associative) | *Perficient - Caterpillar* | 2022 – 2023 - **Technologies:** Java 21 (Spring Boot), Node.js, React, RESTful APIs, Microservices, SQL, Git, Jira - Maintained and expanded a global, high-scale e-commerce system, utilizing REST APIs and microservice-oriented patterns to process transactions and catalog search queries. - Refactored full-stack features with React and Node.js components, ensuring responsive UI/UX and seamless integration with secure backend microservices. - Worked in an agile, cross-functional, and multicultural team across the USA, India, and LATAM, using English as the primary language. - Handled high-performance relational database optimization and structured query development in SQL to support scalable checkout operations.

Software Engineer Specialist | *Citibank* | 2021 – 2022 - **Technologies:** Java, Spring Beans, Oracle SQL, Microservices, Jenkins, Gradle, WebSphere, C++ Integration - Designed, implemented, and delivered core financial

software modules handling critical monthly banking reporting, transactional processing, and ledger reporting. - Led a high-impact database migration from Sybase to Oracle SQL, coordinating with global teams (USA, Ukraine, India, Chile). - Coordinated microservice components and low-level integrations (utilizing C++ modules and Unix scripts for high-performance batch processing) within WebSphere-managed systems. - Championed agile methodology and continuous integration (CI/CD) pipelines using Jenkins.

Tech Lead / Lead Software Engineer | *Seven IT SpA (Healthcare Portal)* | 2017 – 2020 - **Technologies:** Node.js, React (Vue.js / jQuery), Spring Boot, PostgreSQL, Google Cloud (VM), GitLab CI - Spearheaded the technical architecture, design, and full-stack development of a mission-critical Healthcare Management System used for clinical records, patient tracking, and medical billing. - Created a responsive, modern frontend using React and Vue.js alongside jQuery and JavaScript, and designed secure, transactional REST APIs backed by PostgreSQL. - Led and mentored a development team of 4 full-stack engineers, overseeing coding standards, architectural reviews, and continuous deployment to Google Cloud VM. - Designed and optimized high-performance SQL queries and stored procedures, assuring 24/7 database availability and zero-loss patient records storage.

Full Stack & Backend Developer | *WebClass, Creasys, Coopeuch, Others* | 2008 – 2017 - **Technologies:** Java, C++, AS/400 integrations, JavaScript/jQuery, Struts, Hibernate, PostgreSQL, Oracle, SQL Server - Executed full-cycle software engineering (requirement analysis, design, development, unit testing, QA, deployment) for banking, ed-tech, and enterprise clients. - Managed high-performance database migrations, secure electronic invoicing platforms, and banking ledger integrations connecting legacy AS/400 databases with modern web applications. - Maintained and optimized legacy backend systems written in Java and C++, assuring secure and efficient memory management, thread-safety, and API interoperability. - Enabled business growth by implementing custom features for a large-scale ed-tech platform serving over 1,800 schools.

Education

B.S. in Computer Science & Software Engineering (*Ingeniería de Ejecución en Computación e Informática*)
Universidad del Bío Bío - Thesis: Extreme Programming (XP) - Theory and Practice (focused on agile methodologies and test-driven design in C++ and Java environments).

Additional Strengths & Certifications

- **Agentic AI & AI-Assisted Engineering:** Expert daily use of agentic harnesses like **Pi.dev** and **opencode**. Deep understanding of prompt engineering, agent skills, state-machine execution, context window optimization, and structured output formatting. Employs human architectural judgment to guide agents, avoiding simple copy-paste and ensuring zero technical debt.
- **Microservices & Low-Level Programming:** Robust understanding of memory management, pointer manipulation, and compilation processes in C++, as well as containerized and container-orchestrated microservices.
- **Cloud Infrastructure:** Proficient in Google Cloud Platform (GCP) and infrastructure automation using Pulumi IaC.
