Professional Summary

I am a **Senior Java Full Stack Developer** with over 15 years of experience architecting, developing, and modernizing critical, high-performance web applications and distributed systems. My primary technical expertise centers around the **Java (Spring Boot / Spring MVC)** ecosystem and modern frontend development with **React and TypeScript**, complemented by strong expertise in relational databases (**PostgreSQL, Oracle PL/SQL**) and infrastructure.

Throughout my career, I have successfully driven **platform modernization** and key architectural decisions across demanding domains such as **E-commerce (Perficient/Caterpillar)**, **FinTech (Citibank)**, and **HealthTech**. I possess a deep understanding of cloud technologies (**Google Cloud, AWS Lambda**), containerization (**Docker**), and **CI/CD pipelines** (Jenkins, GitLab CI, Azure DevOps).

I actively adopt cutting-edge engineering paradigms, integrating **Agentic AI harnesses (Pi.dev, OpenCode)** in my daily development. Rather than merely delegating, I apply strict software craftsmanship, architectural reasoning, and deep thinking to orchestrate software agents—safeguarding clean code, solid design patterns, and boosting delivery efficiency by up to 300%.

Technical Skills

- **Primary Stack:** Java (8 - 21), Spring Boot, Spring MVC, React, TypeScript, JavaScript (ES6+), SQL
- **Distributed Systems & Cloud:** Google Cloud Platform (GCP), AWS Lambda, Pulumi IaC, Microservices Architecture, RESTful APIs
- **Databases:** PostgreSQL, Oracle PL/SQL, Sybase, MySQL, MongoDB
- **DevOps & Containers:** Docker, Kubernetes, CI/CD (Jenkins, GitLab CI, Azure DevOps), Gradle, Maven, Git
- **Agentic AI & Engineering:** Pi.dev, OpenCode, Software Agent Harnessing, Prompt Engineering
- **Methodologies:** Agile (Scrum, Kanban), Extreme Programming (XP), Test-Driven Development (TDD)

Professional Experience

Lead Software Engineer / Tech Lead | *Mobility Startup* | 2024 – Present - **Technologies:** Java 21 (Spring Boot), React, TypeScript, Google Cloud Platform, Pulumi IaC, Docker, Agentic AI (Pi.dev, OpenCode), Elixir, Ash Framework, Flutter. - Designed and built the complete architecture of a highly scalable, distributed mobility platform from scratch, establishing coding standards and DevOps practices. - Developed the backend services using Java (Spring Boot) and front-end management interfaces utilizing React and TypeScript. - Integrated **Agentic AI harnesses (Pi.dev, OpenCode)** into the daily development cycle, orchestrating software agents with high architectural rigor to design custom skills, commands, and automated workflows. This tripled feature delivery speed while maintaining outstanding code quality. - Directed platform modernization and architectural decisions, utilizing GraalVM for native compilation and deploying containerized services with Docker onto Google Cloud Platform. - Automated cloud infrastructure using Pulumi (IaC) and set up continuous integration/delivery (CI/CD) workflows to ensure stable, automated deployments.

Senior Java Full Stack Developer (Associative) | *Perficient - Caterpillar* | 2022 – 2023 - **Technologies:** Java 21 (Spring Boot / Spring MVC), React, TypeScript, RESTful APIs, Git, Docker, Agile. - Developed and maintained critical modules of Caterpillar's global e-commerce system, ensuring maximum uptime and transaction security. - Designed and updated user-facing features using React and TypeScript, fully integrated with high-performance Java Spring backend microservices. - Participated actively in platform modernization discussions, identifying bottleneck services and refactoring them to improve distributed system scalability. - Collaborated in a highly agile, multicultural environment with engineering teams across the USA, India, and Latin America, leading

technical discussions in English. - Optimized local and staging environments by containerizing components with Docker and automating builds with Gradle.

Senior Java Developer (Specialist) | *Citibank* | 2021 – 2022 - **Technologies:** Java, Oracle PL/SQL, Spring Beans, Spring MVC, Jenkins, Git, Gradle, Websphere, Sybase, Docker. - Designed and developed secure backend solutions for monthly banking requirements using an internal Spring-based framework. - Led a massive database modernization project, migrating critical banking tables and procedures from Sybase to Oracle within a multi-cultural global team (spanning USA, Ukraine, India, and Chile). - Authored and optimized complex PL/SQL stored procedures and reports to ensure zero downtime and strict adherence to financial regulatory requirements. - Maintained and optimized continuous integration (CI/CD) pipelines in Jenkins, facilitating reliable Websphere deployments.

Lead Software Engineer / Tech Lead | *Seven IT SpA (Hospital Cruz del Norte, SQM)* | 2017 – 2020 - **Technologies:** Spring Boot (REST, MVC), PostgreSQL, JavaScript, React, Linux, Google Cloud (VM), GitLab CI, Docker, jQuery, Bootstrap. - Owned the technical design, system architecture, and development of a custom Healthcare Management System used for real-time patient clinical records and care control. - Led and mentored a cross-functional team of 4 software developers, defining architectural guidelines and performing comprehensive code reviews. - Designed and implemented a robust billing and payment management system utilizing Spring Boot and dynamic frontend interfaces with React, JavaScript, and Bootstrap. - Migrated legacy on-premise systems to Google Cloud VMs, utilizing Docker containers and GitLab CI/CD pipelines to modernize deployment practices and reduce infrastructure overhead.

Senior Java Full Stack Developer | *WebClass, Creasys, Coopeuch, Others* | 2008 – 2017 - **Technologies:** Java, Struts, Hibernate, Spring, React, JavaScript, PostgreSQL, Oracle, SQL Server, AS/400, Jenkins, Docker. - Executed full-cycle software development—from initial requirements gathering and system architecture to database design, implementation, and deployment—across banking, EdTech, and corporate environments. - Led platform modernization initiatives, including the migration of legacy core banking platforms from AS/400 structures into scalable Java-based applications. - Built and modernized key modules for electronic invoicing, core banking migrations, and real-time incident resolution systems. - Pioneered and designed new, highly interactive modules for an educational platform utilized by over 1,800 schools, significantly increasing company sales and platform engagement.

Education

Computer Science and Informatics Engineering | *Universidad del Bío Bío* - Thesis: Extreme Programming (XP) - Theory and practice.
