

- Gonzalo Oviedo Lambert
- *Agentic Software Engineer — Full Stack (Java, React, Cloud)*
- Limache, Valparaíso Region, Chile | GMT-4 - UTC-4
- gonzalo.oviedo.dev@gmail.com | +56 9 6372 3603
- linkedin.com/in/gol | Intermediate English B1 (Experience in multicultural U.S. teams)

Professional Summary

Senior Software Engineer with over 15 years of experience designing and delivering critical, scalable full-stack applications. Core expertise in **Java (Spring Boot)**, complemented by **React, SQL (Oracle, PostgreSQL)**, and cloud infrastructure (**Google Cloud Platform, Pulumi IaC**).

My daily workflow is built around **agent software harnesses (Google Antigravity, Pi.dev, opencode)** as a primary development environment. I operate as an **AI coder who not only delegates to AI but applies architectural judgment, deep thinking, and systems design** to orchestrate agents effectively. I specialize in context engineering — structuring codebases, specifications, and documentation to produce reliable, context-efficient AI output — and translating complex product requirements into machine-executable, AI-friendly specifications. I maintain rigorous human-in-the-loop review practices for high-impact production systems.

AI-First Engineering Approach

I work daily with **Google Antigravity, Pi.dev, and opencode** as my primary development harnesses. My approach goes beyond simple AI delegation — I apply **critical judgment, architectural criteria, and deep systems thinking** to orchestrate agents toward production-grade outcomes.

- **Context Engineering:** Structuring codebases, specs, and docs for reliable, context-efficient AI output across large multi-file systems.
- **AI-to-Spec Translation:** Converting product requirements into precise, machine-executable specifications that AI systems can implement reliably.
- **Iterative Refinement:** Systematically improving AI-generated code through structured feedback loops and disciplined iteration.
- **Human-in-the-Loop Review:** Risk-adjusted validation protocols for safety-critical and high-impact code paths.
- **Cross-Stack AI Delivery:** Using AI to deliver production-ready systems spanning frontend, backend, and cloud infrastructure.

Technical Skills

Backend: Java (1.8 - 21), Spring Boot, RESTful APIs, Microservices, SQL, Python (basic), C#, Node.js **Frontend:** React, Vue.js, JavaScript (ES6+), Flutter **AI / Agent Harnesses:** Google Antigravity, Pi.dev, opencode — daily use as primary coding environment; agent lifecycle design; AI-first development workflows **Databases:** PostgreSQL, Oracle PL/SQL, MySQL, MongoDB **Cloud & DevOps:** Google Cloud Platform (Pulumi IaC), Docker, Jenkins, GitLab CI, Azure DevOps **Methodologies:** Agile (Scrum), Lean, CI/CD, Extreme Programming (XP thesis)

Relevant Experience

CTO & Co-founder | *Mobility Startup* 2024 — Present **Technologies:** Java 21 (Spring Boot), Flutter, Elixir, Google Cloud, Pulumi, Google Antigravity, Pi.dev, opencode

- Architecture and full-stack development of an AI-powered mobility platform using Google Antigravity, Pi.dev, and opencode as primary development harnesses to coordinate AI-driven implementation across the entire codebase.
- Design and implementation of the agent lifecycle (skills, commands, workflows) within agent harness execution environments, integrating LLMs for cost optimization without sacrificing performance.

- Context engineering: structuring codebases, specifications, and documentation to produce reliable, context-efficient AI output.
- Translation of complex product requirements into machine-executable, AI-friendly specifications.
- Systematic improvement of AI-generated output through structured iteration and feedback loops.
- Automated cloud infrastructure with Pulumi IaC on Google Cloud Platform.

Java Associative Developer | *Perficient — Caterpillar* 2022 — 2023 **Technologies:** Java 21 (Spring Boot), React, Microservices

- Development and maintenance of a global e-commerce system using Java and modern frontend frameworks.
- Cross-stack delivery across frontend, backend, and integration layers.
- Collaboration in distributed Agile teams (U.S., India, Latin America) with disciplined code review and QA practices.

Java Specialist | *Citibank* 2021 — 2022 **Technologies:** Java, Spring Beans, Oracle SQL, Jenkins, Git

- Backend solutions for complex financial requirements in a high-stakes, safety-critical environment.
- Database migration (Sybase to Oracle) ensuring data integrity across large volumes.
- Continuous remote collaboration in global multicultural teams.

CTO | *Seven IT SpA (Cruz del Norte Hospital, SQM)* 2017 — 2020 **Technologies:** Spring Boot (REST, MVC), PostgreSQL, Google Cloud, JavaScript, Vue.js

- Full-stack development of a healthcare management system handling hospital records, payments, and reporting.
- Human-in-the-loop validation practices for high-impact healthcare data flows.
- Leadership of a 4-developer team, delivering production systems end-to-end.

Java/Senior Developer | *WebClass, Creasys, Coopeuch, Others* 2008 — 2017 **Technologies:** Java, Hibernate, PostgreSQL, Oracle, SQL Server, Jenkins

- Full-cycle development across banking, ed-tech, and enterprise sectors.
- Agile and Lean methodologies applied in team environments.

Education

Computer Science Execution Engineering | Universidad del Bío Bío Thesis: Extreme Programming (XP) — Theory and practice. (4-year degree).
