Dear 23people and Equifax Hiring Team,

I am applying for the **Senior Developer Java / Spring Boot** position supporting **InterConnect**, Equifax's decisioning platform.

The role asks for 4+ years of Java and Spring Boot. I bring **more than 15**, built almost entirely in domains where a wrong decision is expensive: **banking at Citibank**, **global e-commerce at Perficient/Caterpillar**, and a **healthcare management system** I architected end to end. That is the mindset a decisioning platform demands — correctness, traceability and availability before cleverness.

Why I fit InterConnect specifically:

- **Backend development and maintenance in Java / Spring Boot.** REST API design, service layers, business-rule logic and data integration are the core of what I have done for a decade and a half — most recently on **Java 21 and Spring Boot** for a mobility platform on GCP.
- **Decision logic close to the data.** At Citibank I implemented banking business logic in **Oracle PL/SQL** and contributed to a Sybase → Oracle migration; at Seven IT I owned **PostgreSQL** schema design, optimization and in-database logic. Rules engines and decisioning flows live in exactly this territory.
- **International, English-speaking agile teams.** I have worked daily in English with colleagues in the **USA, Ukraine, India and LATAM** — stand-ups, code reviews, technical documentation and vendor calls. Working inside a global team is my normal, not an adjustment.
- **Self-management.** I have led technical teams and owned architecture decisions, which means I move projects forward without needing to be steered task by task.

One differentiator worth mentioning: for the past year my day-to-day development runs through **AI agent harnesses (Pi.dev, Claude Code, OpenCode)**. I do not simply delegate to them — I design and extend the harnesses themselves and apply architectural judgement to orchestrate them across design, implementation, testing and refactoring. In practice this sustains roughly **3x delivery speed** on backend work, with far higher peaks on repetitive tasks, while keeping code quality and maintainability intact. For a hub like the Santiago Development Center, which concentrates a large share of Equifax's global engineering, that is compounding leverage.

I am based in Chile, available immediately, and comfortable with both the **09:00–18:00 schedule** and the **hybrid 2x3** model. I would welcome the chance to discuss how I can contribute to InterConnect.

Kind regards,

Gonzalo Oviedo Lambert Senior Backend Developer — Java · Spring Boot
