English: professional working proficiency — 6+ years in fully English-speaking distributed teams (US, India, Ukraine)

Professional Summary

Backend engineer with 15+ years of professional software engineering experience across banking, healthcare, and high-traffic education platforms. Since 2024 I build production systems in Elixir and Phoenix, my primary stack today: I own two Elixir/Phoenix systems live with real users, model the domain on Ash Framework (Ecto-based data layer) on PostgreSQL, and design and implement the RESTful APIs that power them. Third-party API integration and legacy-system modernization are daily work — I have led legacy migrations (AS/400 to Java, Sybase to Oracle) without stopping operations. AI-assisted development is part of how I write code every day: Claude Code is my primary harness, and I prompt, guide, and review AI-generated code inside a spec-plan-execute-verify loop gated by an automated test suite.

Technical Skills

- **Elixir & Phoenix:** Elixir, Phoenix Framework, Phoenix LiveView, Ash Framework, Ecto (Ash Framework's underlying data layer), OTP (GenServers, Supervisors, supervision trees), ExUnit — two production systems live since 2024.
- **APIs & Databases:** RESTful API design and implementation, PostgreSQL, SQL, third-party API integration (Google Maps Directions, Distance Matrix, and Geocoding APIs), Oracle PL/SQL, MySQL, MongoDB.
- **Legacy systems & reliability:** modernized legacy codebases while improving reliability and maintainability — AS/400 to Java banking-batch migrations, Sybase-to-Oracle migration (15M+ financial records, zero data loss).
- **Testing & CI/CD:** ExUnit, JUnit, Jest, automated test suites as the quality gate before merge, Docker (multi-stage builds), GitLab CI/CD, GitHub Actions, Azure Pipelines, Jenkins.
- **AI-assisted development:** Claude Code (daily driver, Max plan) — primary harness; Pi.dev and opencode for agent-workflow design; prompting, guiding, and reviewing AI-generated code in production.
- **Earlier stack:** Java (1.8-21, Spring Boot), Flutter, Vue.js — 15 years across banking, healthcare, and enterprise systems.

Honest Notes on This Role's Stack (read before the interview)

- **React Native:** the mobile backend work described below powers a **Flutter** application, not React Native. I have not shipped a React Native app in production, though the backend/API discipline (REST design, real-time data for mobile clients, mobile-facing auth) is the same skill this role is asking for.
- **Ecto:** my hands-on Ecto experience is through **Ash Framework**, which uses Ecto as its data layer — I have not used Ecto directly outside of Ash.
- **eCommerce / powersports / multi-tenant:** no direct production experience with these domains; closest adjacent work is a global e-commerce platform (Caterpillar, Java/Spring Boot) and a multi-tenant-adjacent healthcare system (Seven IT SpA).
- **GitHub Codespaces:** no hands-on production use; comfortable with remote/cloud dev environments in general (daily use of Claude Code in cloud and local setups).

Professional Experience

Tech Lead & Elixir Engineer | Mobility Startup — TeLlevoApp | 2024 - Present *Technologies: Elixir, Phoenix, Phoenix LiveView, Ash Framework, Ecto, OTP, PostgreSQL, Google Cloud, Docker, Pulumi, Claude Code.*

- Own two Elixir/Phoenix systems in production: `www.tellevoapp.cl` and `app.tellevoapp.cl`, a carpooling platform with real users since 2024 whose entire web frontend is built in Phoenix LiveView.
- Design and implement the platform's RESTful APIs in Phoenix, with the domain modeled on Ash Framework and PostgreSQL as the data store, using OTP supervision trees for fault-tolerant concurrent processing.
- Build backend services powering the platform's Flutter mobile app for riders and drivers, resolving real-time coordinate data (pickup/drop-off points, route and distance calculation) through third-party integration with Google Maps APIs (Directions, Distance Matrix, Geocoding).
- Automated the GCP infrastructure with Pulumi (IaC) on Cloud Run serverless containers, with GitLab CI/CD and GitHub Actions running the automated test suite as the merge gate.
- Use Claude Code daily as the team's primary AI-assisted development harness — every feature runs through a spec-plan-execute-verify loop; I prompt, guide, and review the AI-generated code before merge.

Java Specialist | Citibank | 2021 - 2022 *Technologies: Java, Oracle PL/SQL, Spring Beans, Jenkins, Gradle, WebSphere, Git.*

- Led the migration of the reporting database from Sybase to Oracle — 15M+ financial records, zero data loss — a legacy-system modernization under strict regulatory release process, working with engineers across the US, Ukraine, India, and Chile.
- Built and maintained recurring reporting for internal bank clients on the bank's internal Spring-based framework, including query tuning and reconciliation against source systems.

Tech Lead | Seven IT SpA — Hospital Cruz del Norte (SQM) | 2017 - 2020 *Technologies: Spring Boot (REST, MVC), PostgreSQL, Google Cloud (VM), Linux, GitLab.*

- Designed, built, and operated a healthcare management system used daily by clinical staff, including the PostgreSQL schema and its evolution over three years in production.
- Introduced GitLab CI/CD and Docker to the team's release process; mentored a team of 4 developers through code review and design sessions.

Other experience (2008 - 2023, condensed)

- **Java Associate Developer, Perficient — Caterpillar (2022 - 2023):** built and maintained backend services for Caterpillar's global e-commerce platform in a distributed Agile/Scrum team across the US, India, and Latin America.
- **Java/Senior Developer, WebClass, Creasys, Coopeuch and others (2008 - 2017):** full-cycle development for banking and ed-tech clients (Santander, Ripley, Coopeuch); led legacy migrations of core banking batch processes from AS/400 to Java without stopping operations; extended an education platform serving 1,800+ schools.

Education & Languages

- **Computer Science and Informatics Engineering (B.Eng., four-year degree)** — Universidad del Bío-Bío, Chile (2005-2009). Thesis: Extreme Programming (XP), theory and practice.
- **Languages:** Spanish (native). English: professional working proficiency — daily written and spoken use since 2021 with distributed teams in the US, Ukraine, and India.
