

Gonzalo Oviedo Lambert

Backend Developer — Node.js/NestJS, PostgreSQL

Current: Limache, Chile (GMT-4) | Relocation: open to Santiago | also fully remote worldwide | +56 9 6372 3603
goviedo.laboral@gmail.com | linkedin.com/in/gol | github.com/goviedodev | English B2

PROFESSIONAL SUMMARY

Backend engineer with 15+ years shipping production systems on PostgreSQL, including two large-scale data migrations with zero data loss. I build backend services in Node.js/TypeScript (NestJS) and Java/Spring Boot, and currently own the backend architecture of a mobility platform live in production, where coordinate data and third-party geolocation APIs are daily work. I designed the agent-harness workflow (spec → plan → execute → verify, gated by automated tests) my team runs on with Claude Code.

TECHNICAL SKILLS

- **Backend:** Node.js/TypeScript (NestJS, layered architecture), Java 8–21 (Spring Boot), REST APIs, JWT auth.
- **PostgreSQL:** schema design, indexing, query tuning, large-scale migrations. Also Oracle PL/SQL, MySQL, SQL Server, MongoDB.
- **Migration / ETL:** moving large volumes between engines, integrity validation, reconciliation.
- **Geospatial:** coordinate-based systems via Google Maps APIs in a production mobility platform — no production PostGIS experience (see note below).
- **CI/CD & DevOps:** Git, GitLab CI, GitHub Actions, Azure Pipelines, Docker, Google Cloud (Cloud Run), Pulumi IaC.
- **AI-assisted development:** Claude Code (daily driver), agent-harness design (Pi.dev, opencode).

Honest notes on this role's stack: PostGIS/spatial queries — coordinates in the mobility platform are handled via Google Maps APIs, not native PostGIS geometries. Kong API Gateway — no hands-on experience. Keycloak — experimented outside production only (production auth experience is JWT/OAuth2, see NestJS project below). Containers — Docker only, no Kubernetes/OpenShift.

SELECTED PUBLIC WORK

Shift-report web app — Next.js 14 + NestJS

github.com/goviedodev/niuro

Stack: NestJS 10, TypeScript, JWT (HS256), Jest, Docker, GitHub Actions, Azure Pipelines.

- Backend in NestJS 10 with layered architecture and a global `ValidationPipe`; unit tests in Jest.
- JWT-based auth with role-based access (operator, supervisor); record authorship taken from the token, never the form payload.
- Docker multi-stage builds; the same CI/CD pipeline implemented in both GitHub Actions and Azure Pipelines.

PROFESSIONAL EXPERIENCE

Tech Lead

2024 – Present

Mobility Startup — app.tellevoapp.cl

Stack: Elixir (Phoenix, Ash), Java 21 (Spring Boot), TypeScript, PostgreSQL, Google Cloud, Pulumi, Docker.

- Own the end-to-end backend architecture of a carpooling platform live in production with real users since 2024.
- Backend logic centers on coordinate data — pickup/drop-off points, route and distance calculation — resolved through Google Maps APIs (Directions, Distance Matrix, Geocoding).
- Automated the Google Cloud infrastructure with Pulumi (IaC); workloads run on Cloud Run.
- Designed the team's AI-assisted development workflow: an agent harness (Claude Code) running spec → plan → execute → verify, with the automated test suite as the merge gate.

Java Developer

2022 – 2023

Perficient — Caterpillar

Stack: Java 21, Spring Boot, REST APIs, distributed Agile team.

- Built and maintained backend services for Caterpillar's global e-commerce platform in a distributed Scrum team across the US, India, and Latin America.

Java Specialist

2021 – 2022

Citibank

Stack: Java, Oracle PL/SQL, Spring Beans, Jenkins, Gradle, WebSphere, Git.

- Migrated the reporting database from Sybase to Oracle — 15M+ financial records, zero data loss — with engineers in the US, Ukraine, India, and Chile under a strict regulatory release process.
- Built recurring reporting for internal bank clients on the bank's internal Spring-based framework: data modeling, query tuning, and reconciliation against source systems.

Tech Lead

2017 – 2020

Seven IT SpA — Hospital Cruz del Norte (SQM)

Stack: Spring Boot (REST, MVC), PostgreSQL, Google Cloud (VM), Linux, GitLab.

- Designed, built, and operated a healthcare management system used daily by clinical staff, owning the PostgreSQL schema through three years of production evolution.
- Introduced GitLab CI/CD and Docker to the release process; led 4 developers through code review and design sessions.

Java / Senior Developer

2008 – 2017

WebClass, Creasys, Coopeuch and others

Stack: Java, AS/400, Struts, Hibernate, PostgreSQL, Oracle PL/SQL, SQL Server.

- Migrated core banking batch processes from legacy AS/400 hosts to Java for Santander, Ripley, and Coopeuch: reverse-engineered the existing process and reimplemented the business logic without stopping operations.
- Wrote queries and stored procedures in PL/SQL and T-SQL for banking and retail reporting.

EDUCATION & LANGUAGES

Computer Science and Informatics Engineering (B.Eng.)

Universidad del Bío-Bío, Chile

Thesis: Extreme Programming (XP), theory and practice.

Languages: Spanish (native) | English B2 — daily use since 2021 with teams in the US, Ukraine, and India.
