

- Gonzalo Oviedo Lambert
- *Software Developer — Full Stack (Java, Node.js, Cloud)*
- Limache, Valparaíso Region, Chile | GMT-4 - UTC-4
- goviedo.laboral@gmail.com | +56 9 6372 3603
- [linkedin.com/in/gol](https://www.linkedin.com/in/gol) | Intermediate English B1 (Experience in multicultural U.S. teams)

Professional Summary

Senior Software Engineer and Tech Leader with over 15 years of experience architecting and building critical, scalable backend and full-stack systems. Core expertise in **Java (Spring Boot)**, complemented by **Node.js/JavaScript, SQL (Oracle, PostgreSQL)**, and automated cloud infrastructure (**Google Cloud Platform, Pulumi IaC**).

A pioneer in AI-augmented development, using **Claude Code (Max plan, heavy daily use)** — Anthropic's own agentic coding harness — as primary engineering environment, with earlier hands-on experience in Pi.dev and opencode. Brings deep practical understanding of how AI models learn, reason, and perform, applying architectural design, context engineering, and human judgment to orchestrate complex software agent workflows. Experienced in leading small engineering teams, DevOps containerization, and remote agile collaboration across U.S. and global multicultural environments.

AI-First Engineering & Model Training Approach

I operate daily as an AI-augmented coder, using **Claude Code (Max plan)** as my primary development workspace — with earlier experience in the Pi.dev and opencode agent harnesses. Rather than blindly delegating, I apply strict architectural criteria, clean coding conventions, and deep logical thinking to instruct and orchestrate agents. This practical domain expertise is highly relevant to training next-generation AI systems:

- **Context Engineering:** Deep understanding of structuring codebases, specifications, and data to produce clean, logical, and context-efficient AI outputs.
- **AI Reasoning Orchestration:** Experience designing the agent lifecycle (skills, commands, workflows) within execution environments, understanding the precise reasoning loops of modern LLMs.
- **High-Quality Domain Inputs:** Expert at writing highly documented, clean, and structured code following rigorous software engineering standards to serve as optimal real-world training examples for LLMs.
- **Human-in-the-Loop Review:** Disciplined verification and iterative refinement to ensure AI-generated output meets exact production-grade standards.

Technical Skills

- **Backend & Full-Stack:** Java (1.8 - 21), Spring Boot, Node.js, RESTful APIs, Microservices, SQL, Bash scripting, Elixir, Phoenix Framework.
- **Frontend:** Flutter, React, Vue.js, JavaScript (ES6+), HTML5/CSS3
- **AI & Agent Harnesses:** Claude Code (Max plan) — daily use as primary coding environment; also Pi.dev, opencode; agent lifecycle design; AI-first workflows and model feedback loops

- **Databases:** PostgreSQL, Oracle PL/SQL, MySQL, MongoDB
- **Cloud & DevOps:** Google Cloud Platform (Pulumi IaC), Docker, AWS (Lambda), Jenkins, GitLab CI, Azure DevOps
- **Methodologies:** Agile (Scrum, Kanban), Lean, CI/CD, Extreme Programming (XP thesis)

Professional Experience

Tech Lead & Lead Software Engineer | *Mobility Startup* 2024 — Present **Technologies:** Java 21 (Spring Boot), Flutter, Elixir, Google Cloud, Pulumi IaC, Claude Code (Max plan), Pi.dev, opencode

- Architected and developed a high-demand mobility platform using Claude Code (Max plan) as the primary development harness to orchestrate agent-driven code implementation across the entire stack.
- Designed and built the agent lifecycle (skills, commands, and workflows) inside custom harness execution environments, refining how LLMs process code context and execute complex reasoning steps.
- Built automated GCP infrastructure via Pulumi, ensuring scalable, secure, and reproducible cloud environments.
- Maintained a clean, highly documented codebase, translating complex business rules into precise, machine-executable specifications.
- Led and mentored a small, remote engineering team, enforcing agile best practices and robust human-in-the-loop code review cycles.

Java Associate Developer | *Perficient — Caterpillar* 2022 — 2023 **Technologies:** Java 21 (Spring Boot), React, microservices, Docker, Jenkins

- Developed and optimized critical microservices for a global e-commerce platform using Java and agile practices.
- Managed and deployed applications using containerized environments and modern CI/CD pipelines.
- Collaborated closely within distributed, remote, multicultural teams (U.S., India, Latin America) utilizing English as the primary language for technical discussions and written communication.
- Maintained high standards for code clarity, writing clean, efficient, and well-documented backend and full-stack solutions.

Java Specialist | *Citibank* 2021 — 2022 **Technologies:** Java, Spring Beans, Oracle SQL, Jenkins, Git

- Designed and implemented robust solutions for complex financial requirements in a safety-critical corporate environment.
- Led the complete migration of core databases from Sybase to Oracle, troubleshooting, debugging, and optimizing SQL code for optimal transaction reliability.
- Worked in high-performance distributed teams, managing version control and continuous integration workflows under strict security protocols.

Tech Lead & Software Architect | *Seven IT SpA (Cruz del Norte Hospital, SQM)* 2017 — 2020 **Technologies:** Spring Boot (REST, MVC), PostgreSQL, Google Cloud, JavaScript, Vue.js

- Owned the technical roadmap and developed a Healthcare Management System handling critical patient records and payment workflows.
- Led a remote engineering team of 4, providing continuous mentorship, architecture planning, and QA guidelines.

- Designed and deployed full-stack solutions with high-impact data verification routines to prevent critical errors.

Java/Senior Developer | *WebClass, Creasys, Coopeuch, Others* 2008 — 2017 **Technologies:** Java, Struts, Hibernate, PostgreSQL, Oracle, Jenkins, Git

- Full-cycle developer designing core software systems for banking, EdTech, and enterprise sectors.
- Managed complex system migrations (including AS/400 to Java architectures) and optimized large codebases to enhance speed and reliability.
- Actively championed Agile and Lean methodologies in team-wide ceremonies to accelerate release cycles.

Education

Computer Science Execution Engineering | Universidad del Bío Bío Thesis: Extreme Programming (XP) — Theory and practice. (4-year college degree).
