

Gonzalo Oviedo Lambert

Full Stack Elixir Engineer | Phoenix & LiveView · Healthcare Platforms · AI/LLM Integration
Chile (UTC-4 — overlaps US Eastern business hours) — Fully Remote goviedo.laboral@gmail.com | +56 9 6372 3603 linkedin.com/in/gol | English B1 (Intermediate)

Professional Summary

Full-stack engineer with **15+ years** building products end to end, currently working daily in **Elixir, Phoenix, Phoenix LiveView and PostgreSQL**. I enjoy owning features from idea to deployment and taking responsibility for what happens in production.

Directly relevant domain experience: I architected and launched a **healthcare management platform** from scratch for Hospital Cruz del Norte, covering patient administrative flows, **scheduling, automated medical payment and billing modules**, and certified PDF reporting — cutting clinical administrative processing time **60%** and patient queue times **40%**. That is the same problem space as attracting, qualifying, scheduling and managing patients.

AI-powered workflow automation is my daily practice. I run **Claude Code, Pi.dev** and **opencode** as my primary development environment and integrate LLMs into real product workflows, using a **spec → plan → execute → verify** loop. This raised delivery velocity **300%** while keeping **99.98%** system stability.

I care more about learning fast, owning outcomes and building software that actually helps people than about checking every box on a technology list.

Technical Skills

Core for this role - Elixir, Phoenix, Phoenix LiveView, Ash Framework, OTP (GenServers, Supervisors, supervision trees) - **PostgreSQL** — schema design, indexing, query optimization, large-scale migrations - **REST APIs**, third-party API integrations, WebSockets, OpenAPI/Swagger - **Git**, GitLab CI/CD, GitHub Actions

Bonus areas listed in the role - Docker and containerized deployments; Kubernetes - **AI / LLM integrations** — Claude Code, Pi.dev, opencode, Playwright MCP, agent orchestration - **Healthcare software** — hospital management platform, medical billing and payment modules - **Payments and communications integrations** — automated medical payment modules, secure billing systems, certified digital reporting

Also - TypeScript / JavaScript (ES6+), React, Vue.js, Node.js, Java (8–21) / Spring Boot, Python - Google Cloud (Cloud Run, Cloud SQL, Cloud Storage), AWS Lambda, Pulumi IaC - Analytics and observability: Elasticsearch, Kibana; RabbitMQ, Redis - TDD, ExUnit, JUnit, 80%+ test coverage

Professional Experience

Lead Software Engineer & Technical Architect | *Mobility Startup 2024 – Present* **Stack:** Elixir, Phoenix, Phoenix LiveView, Ash Framework, OTP, Google Cloud, Pulumi IaC, Docker, Claude Code, Pi.dev, opencode.

- **Two Elixir/Phoenix products in production:** www.tellevoapp.cl (full Elixir/Phoenix site) and app.tellevoapp.cl, where the **entire frontend is built in Phoenix LiveView**.
- Owned features from idea to deployment: platform architecture on **Elixir/Ash Framework** with OTP supervision trees for fault tolerance, plus PostgreSQL data modeling.
- **AI-powered workflow automation:** made autonomous agents the team's default execution layer, applying architectural judgment and automated verification gates rather than blind delegation — **300%** delivery velocity at **99.98%** stability.
- Automated cloud infrastructure with **Pulumi IaC** on GCP; serverless APIs cut hosting cost **45%** and latency **30%**.
- Partnered directly with company leadership on technical direction, and with legal and commercial stakeholders on compliant data and digital signature flows.

Lead Developer & Tech Lead | *Seven IT SpA (Hospital Cruz del Norte, SQM) 2017 – 2020* **Stack:** Node.js, Spring Boot, PostgreSQL, Vue.js, Google Cloud, Docker, GitLab CI/CD.

- **Healthcare platform from scratch:** architected and launched a scalable Healthcare Management System, reducing clinical administrative processing time **60%** and patient checkout queue time **40%**.
- **Patient billing and payments:** built automated medical payment modules and secure billing systems, reducing administrative billing errors **25%**, with certified digital PDF reporting.
- Led and mentored 4 full-stack engineers; introduced GitLab CI/CD and Docker, cutting GCP spend **30%**.

Senior Java & Full-Stack Developer | *Perficient — Caterpillar 2022 – 2023* **Stack:** Java 21 (Spring Boot), REST APIs, microservices, Docker, GitHub, GitLab.

- Refactored backend microservices and global e-commerce payment flows: **35%** faster APIs, **12%** less cart abandonment.
- Raised JUnit coverage to **85%**, cutting post-release regressions **18%**.

Senior Java Specialist | *Citibank 2021 – 2022* **Stack:** Java, Oracle SQL, PL/SQL, Spring Beans, Jenkins.

- Migrated **15M+ financial records** from Sybase to Oracle with **0% data loss**; **50%** faster queries.
- Automated monthly financial reporting, saving **120+ engineering hours per month**.

Senior Software Engineer | *WebClass, Creasys, Coopeuch and others 2008 – 2017* **Stack:** Java, PHP, .NET, C, Python, Struts, Hibernate, PostgreSQL, SQL Server, Oracle.

- Scaled an education platform to **1,800 schools** and **500k+ daily requests** at **99.9% uptime**.

Education

Computer Science and Informatics Engineering — Universidad del Bío Bío *Thesis: Extreme Programming (XP) — Theory and Practice.*
