

Gonzalo Oviedo Lambert

Software Engineer — Backend & Data

Santiago, Chile (GMT-4) · goviedo.laboral@gmail.com · +56 9 6372 3603 · linkedin.com/in/gol

Summary

Backend engineer who builds and operates Java/Spring Boot and Elixir systems end-to-end: discovery, design, implementation, rollout, and production support. Strong SQL and data modeling background from banking — including a Sybase-to-Oracle migration of 15M+ financial records at Citibank with zero data loss. I use AI coding agents daily as part of my development workflow, with automated test suites as the quality gate: I designed the agent harness my team runs on (skills, commands, spec → plan → execute → verify), so I treat prompts and agent configs as versioned artifacts, not magic. Currently owning the full architecture of a mobility platform in production, mentoring the team without supervision.

Technical Skills

- **Backend:** Java (1.8–21), Spring Boot, Elixir (Phoenix, Ash Framework), REST APIs
 - **SQL & data modeling:** PostgreSQL, Oracle PL/SQL, MongoDB, MySQL; large-scale data migration and reporting pipelines
 - **Cloud & containers:** Google Cloud (Cloud Run, serverless), Pulumi (IaC), Docker, AWS Lambda
 - **AI coding tools:** Claude Code and agentic coding harnesses (Pi.dev, opencode) — agent lifecycle design, LLM routing through an OmniRoute proxy for cost control, output validation through automated tests
 - **CI/CD & tooling:** Git, Jenkins, GitLab CI, Azure DevOps, Gradle
 - **Frontend (working knowledge):** Flutter, Vue.js/Nuxt, React
-

Experience

Tech Lead — Mobility Startup (TeLlevoApp) · 2024 – Present *Elixir, Ash Framework, Java 21 (Spring Boot), GraalVM, Flutter, Google Cloud, Pulumi, agentic AI (Pi.dev)*

- Own backend features end-to-end: architecture, implementation, rollout, and ongoing operations of a mobility platform live in production at app.tellevoapp.cl since 2024.
- Designed and built the team's AI-assisted development workflow — an agent harness with defined skills, commands, and a spec → plan → execute → verify cycle — using automated test suites to validate agent output before anything merges. Prompts and configs live in version control like any other artifact.
- Automated the entire cloud infrastructure with Pulumi (IaC) on Google Cloud, migrating workloads to Cloud Run serverless to keep operating costs predictable.
- Work daily with Claude Code for implementation, debugging, and refactoring, routing LLM traffic through an OmniRoute proxy to select cheaper models where evaluation showed no quality regression — same discipline I apply to performance tuning.

Java Developer — Perficient (Caterpillar) · 2022 – 2023 *Java, Spring Boot*

- Developed and maintained backend services for Caterpillar's global e-commerce system in an agile, distributed team across the US, India, and Latin America.
- Day-to-day work fully in English: code reviews, pairing, sprint ceremonies, and written design discussions.

Java Specialist — Citibank · 2021 – 2022 *Java, Oracle SQL, Spring, Jenkins, Gradle, WebSphere*

- Migrated the reporting database from Sybase to Oracle — 15M+ financial records, zero data loss — working with engineers in the US, Ukraine, India, and Chile.
- Built and maintained recurring data reports for internal clients, which meant living in SQL: data modeling, query tuning, and reconciliation checks against source systems.

- Delivered monthly backend features on the bank's internal Spring-based framework under a strict release and audit process.

Tech Lead — Seven IT SpA (Hospital Cruz del Norte, SQM) · 2017 – 2020 *Spring Boot, PostgreSQL, Google Cloud, GitLab, JavaScript*

- Built and operated a healthcare management system (medical, nursing, and physiotherapy records) as owner, architect, and developer, leading a team of 4.
- Shipped the payments module and PDF reporting for hospital administration.

Java / Senior Developer — WebClass, Creasys, Coopeuch, others · 2008 – 2017

- Full-cycle development for banking and ed-tech: AS/400-to-Java migrations, electronic invoicing, incident management, and an educational platform serving 1,800 schools with 500k+ daily requests.

Education & Languages

B.Eng. in Computer Science — Universidad del Bío-Bío, Chile. Thesis: Extreme Programming (XP), theory and practice.

English: Professional working proficiency — 6+ years in fully English-speaking distributed teams (US, India, Ukraine). **Spanish:** native.
