

Gonzalo Oviedo Lambert

Senior Platform Engineer | Elixir/OTP · AI Agent Infrastructure · Developer Experience Chile (UTC-4) — Fully Remote, LATAM goviedo.laboral@gmail.com | +56 9 6372 3603 linkedin.com/in/gol | English B1 (Intermediate)

Professional Summary

Senior Platform Engineer and Technical Architect with **15+ years** building concurrent, distributed and cloud-native systems. I combine **production Elixir/Phoenix/OTP** with deep platform and infrastructure work — internal tooling, CI/CD golden paths, and shared services extracted from fragmented codebases.

AI-first workflow as a daily practice, not an experiment. I run **Claude Code**, **Pi.dev** and **opencode** as my primary development environment, operating agentic harnesses through a disciplined **spec → plan → execute → verify** loop. I author and maintain **CLAUDE.md**-style agent instruction files and repo-level guardrails so autonomous agents operate predictably inside the SDLC, and I use **Playwright MCP** for agent-driven end-to-end verification. This lifted engineering delivery speed by **300%** while holding **99.98%** system stability — because the human judgment stays on architecture, guardrails and test rigor.

I treat internal developer tooling with the same standard as customer-facing product, and I default to defining the problem before proposing the solution.

Technical Skills

- **Elixir & BEAM:** Elixir, Phoenix, Phoenix LiveView, Ash Framework, OTP (GenServers, Supervisors, supervision trees), fault-tolerant concurrent design.
 - **AI Agent Infrastructure:** Claude Code, Pi.dev, opencode, **CLAUDE.md** agent instruction design, Playwright MCP, LLM integration, agent orchestration, spec-driven development, automated verification loops.
 - **Platform & Infrastructure:** Internal developer platforms, CI/CD golden paths, Docker, Kubernetes, **Pulumi (IaC)**, GitLab CI/CD, GitHub Actions, Jenkins, GraalVM.
 - **Cloud:** Google Cloud (Cloud Run, Cloud SQL, Cloud Storage), AWS (Lambda), Azure DevOps, Cloudflare Workers.
 - **Languages:** Elixir, **TypeScript / JavaScript (ES6+)**, Java (8–21), Node.js, Python, SQL, Bash, Dart.
 - **Data & Messaging:** PostgreSQL, Oracle PL/SQL, MySQL, MongoDB, Redis, **RabbitMQ**, Kafka, Elasticsearch, Kibana.
 - **Architecture:** Microservices, event-driven systems, CQRS, Clean/Hexagonal Architecture, SOLID, REST APIs, WebSockets, shared platform services.
 - **Testing & Quality:** ExUnit, JUnit, Mockito, Playwright MCP, TDD, spec-driven development, 80%+ coverage, OpenAPI/Swagger.
-

Professional Experience

Lead Software Engineer & Technical Architect | *Mobility Startup 2024 – Present* **Stack:** Elixir, Phoenix, Phoenix LiveView, Ash Framework, OTP, Java 21, Google Cloud, Pulumi IaC, Docker, Claude Code, Pi.dev, opencode.

- **Two Elixir/Phoenix systems in production:** www.tellevoapp.cl (full Elixir/Phoenix site) and app.tellevoapp.cl, whose entire frontend is built in **Phoenix LiveView**.
- **Platform architecture on the BEAM:** designed the mobility platform on **Elixir/Ash Framework**, implementing concurrent processes with **OTP** (GenServers, Supervisors, supervision trees) for fault tolerance under load.
- **Agent-ready engineering platform:** established autonomous software agents as the team's default execution layer, defining the golden path for how agents operate in the SDLC — repo-level instruction files, guardrails, and automated verification gates. Result: **300% delivery velocity** at **99.98% stability**.

- **Infrastructure as Code:** automated the full cloud footprint with **Pulumi** on GCP; serverless APIs on Cloud Run cut hosting cost **45%** and request latency **30%**.
- **Cross-functional ownership:** drove architecture decisions end-to-end and aligned them with commercial, legal and operational stakeholders.

Senior Java & Full-Stack Developer | *Perficient — Caterpillar 2022 – 2023* **Stack:** Java 21 (Spring Boot), REST APIs, microservices, SQL, Docker, GitHub, GitLab, Agile.

- Refactored critical backend microservices and global e-commerce payment flows, improving API response times **35%** and reducing cart abandonment **12%**.
- **Developer experience:** standardized local development environments with Docker and raised JUnit coverage to **85%**, cutting post-release regressions **18%**.
- Streamlined PR review cycles across distributed teams (US, India, LATAM), reducing merge-approval time **20%**.

Senior Java Specialist | *Citibank 2021 – 2022* **Stack:** Java, Oracle SQL, PL/SQL, Spring Beans, Jenkins, Gradle, WebSphere.

- Migrated complex transactional structures from Sybase to Oracle: **15M+ financial records, 0% data loss, 50%** faster queries.
- Automated monthly financial reporting, saving **120+ engineering hours per month** and cutting processing errors **40%**.
- Worked under strict banking security standards with squads across US, Ukraine, India and Chile.

Lead Developer & Tech Lead | *Seven IT SpA (Hospital Cruz del Norte, SQM) 2017 – 2020* **Stack:** Node.js, Spring Boot, PostgreSQL, Vue.js, Google Cloud, Docker, GitLab CI/CD.

- Architected and launched a healthcare management platform from scratch, cutting clinical administrative processing time **60%**.
- Led and mentored 4 full-stack engineers; introduced GitLab CI/CD and Docker containerization, reducing GCP spend **30%**.

Senior Software Engineer | *WebClass, Creasys, Coopeuch and others 2008 – 2017* **Stack:** Java, PHP, .NET, C, Python, AS/400, Struts, Hibernate, PostgreSQL, SQL Server, Oracle.

- Scaled an education platform to **1,800 schools** and **500k+ daily requests** at **99.9% uptime**.
- Led legacy migrations (AS/400 → modern Java), saving clients **80+ manual hours weekly**.

Education

Computer Science and Informatics Engineering — Universidad del Bío Bío *Thesis: Extreme Programming (XP) — Theory and Practice.*
